

Large swivel range

Can be operated at the touch of a button

TURNY EVO

Innovative lift and swivel seat for the easy transfer from wheelchair to car

Version Turny V3.0 08/2020 EN

Umsteigen & Einsteigen

Do you have problems when entering a vehicle? Do you sit in a wheelchair due to a disability and still want to sit comfortably on the passenger side of your car?

The Turny lift-swivel seat turns out of the car and lowers. To enter your car, the movement reverses so that you are „lifted“ comfortably into your vehicle.

To ensure that you sit safely and comfortably, PARAVAN has developed special seating systems for the TURNY. The slightly inclined seat cushion runs towards the front edge, completely relieving the thigh muscles and reducing the risk of slipping forward. Thus, the ergonomically correct position of the pelvis close to the backrest is optimally supported. The ergonomically shaped back section with adjustable 2-fold Schukra lumbar support provides additional support for the pelvis and lumbar region.

- For driver and passenger side (can swivel right or left)
- Customizable movement control
- Integrated anti-jamming protection
- No restriction when reclining the backrest
- Electric horizontal seat adjustment in the vehicle
- Including integrated footrest, that can be folded away when not in use
- Wired remote control with display for important status messages
- Easy operation in an emergency
- 160 kg weight capacity
- Lift height of up to 390 cm
- Available with PARAVAN's comfort seat on request
