The Paravan Caddy

PARAVAN
MOBILITY FOR LIFE

For further information please read out the QR-Code

All-Round Talent

An enjoyable ride, versatility and comfort for wheelchair users. These are the aspects that had top priority while we were developing our Paravan Caddy for the disabled. The Paravan Caddy is characterised by a lowered floor from front to back as well as from left to right, freedom from barriers and plenty of space for several wheelchairs. Whether with the wheelchair on the driver's side, the original car seat on the front passenger side or the other way round: Paravan's clever, versatile seat concept means you can change drivers with little effort. If wished, the rigid back seat of the standard version can be replaced with two integrated folding swivel seats during adaptation. This lets you drive in or out of your car easily and without obstacles: the Caddy is ready for an excursion with the whole family!
