TRANSFER SEAT BASE

Transferring from the wheelchair to the driver or passenger seat has never been easier

Version Transferkonsole V3.0 09/2020 EN

- Crash tested and successfully passed according to ECE-R 17 and 74/408/EWG
- Three-directional movements:
 - » Forwards/backwards (ca. 700 mm)
 - » Up/down (ca. 200 mm)
 - » Rotating to left/right (180°)
- Modular design: individual movement directions can also be selected
- 180-degree rotation (left and right)
- Very compact installation dimensions
- Maintenance-free, powerful electric motors
- No obstructive rails at the back (free floating)
- Tidy cabling (cable drag chain)
- Guided via top-grade ball bearings (instead of plastic rollers)
- Radio remote control available (PARAVAN system) Can be combined with other functions (ramp, sliding door, pulling-in aid)
- Unique emergency release system for rotating and forwards/backwards (as an option)
- Low power consumption (10A)
- Switching devices for operation can be mounted to suit the customers requirements
- Maximum stability by means of bolts (in the driver position)
 - » No strain on the sprocket/toothed rack
 - » Electric motor does not vibrate
 - » Preserves the material
 - » Add. safeguard in case of an accident
- Vehicle-specific installation consoles also available for particularly suitable vehicles
- It is advisable to use the specially developed wheelchair seat (610) (crash-tested, integrated 3 or 4-point belt), as an option
- Max. user weight incl. seat + person: 140 kg (6-way console)
- Many original car seats can be mounted
